

FLEXcon excels in the design and manufacture of transfer tapes and single and double-coated pressure-sensitive product constructions.

Our coating capabilities allow us to customize products to solve a wide range of performance requirements. We have a vast array of raw materials, and application specialists to work with you to develop the ideal solution to suit your converting and end-use requirements.

Carrier:

FLEXcon's selection of over 1300 substrates provides a diverse collection of carrier options. Many of the substrates are available in different colors and thicknesses.

Examples of our carrier options include:

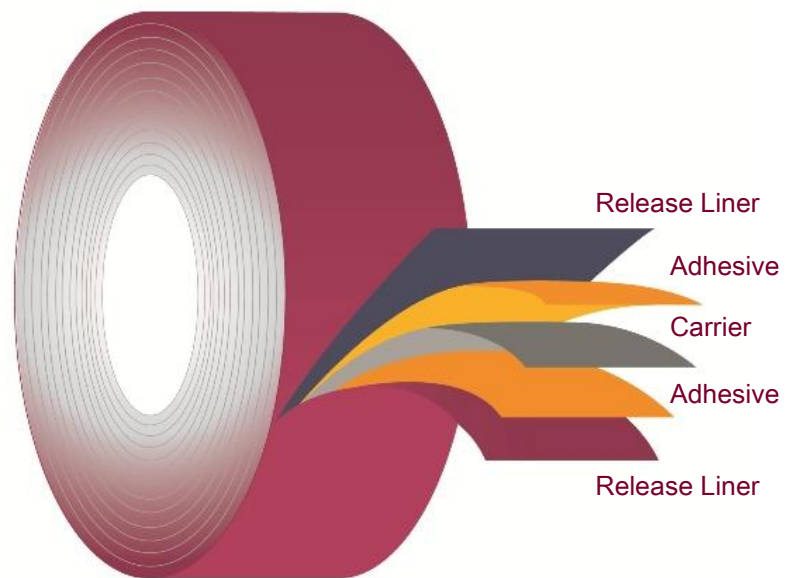

- Polycarbonate
- Polyester
- PVC

Adhesive:

FLEXcon offers a variety permanent and removable adhesives including:

- Aqueous
- Silicone
- Solvent

Our coating capabilities allow us to coat thicknesses varying from .25 mil to 10 mil and anywhere in-between. Double-coated products can be constructed with different adhesives on each side of the carrier film.

Release Liner:

Double-coated products can be manufactured with one or two liners. We offer a variety of liner choices to comply with the many converting methods:

- 55 lb. semi-bleached white kraft differential release liner
- 60 lb. semi-bleached white kraft polycoated differential release liner
- 84 lb. natural kraft polycoated layflat differential release liner
