

## Flexcon® PharmCal® CryoFLEX™ 000300 (CryoFLEX™ PEWM)

3.5 mil white matte polyethylene film for cryogenic labeling.

FLX000300

### Benefits

- Product survives dry ice storage and transportation conditions
- 6-month change notification

### Features

- 3.5 mil white matte polyethylene is ideal for cryogenic specimen storage and testing applications: -112°F to 212°F (-80°C to 100°C) on PP vials; -320.8°F to 212°F (-196°C to 100°C) on EVA bags and paper boxes
- Print-receptive film accepts UV and flexographic inks, and thermal transfer
- High-performance permanent acrylic adhesive provides a good bond to low- and high-surface energy plastics, and glass for reliable performance in extreme cold temperatures
- Backed with a 50 lb. bleached kraft release liner ideal for roll-form converting
- Liner is suitable for optical sensing on most thermal transfer printers

### Additional Details

Recommendations:

Since laboratory storage/test conditions and procedures can vary significantly, be sure to thoroughly test the labels in the intended process/application environment. To achieve ultimate adhesion in cryogenic conditions, labels should be applied at room temperature.
